Geldburg Pro-coin

Geldburg Procoin is the world's first digital coin which runs on a mathematical formula, Procoin means it will never go down from its old rate. This is a USDT-based digital coin whose transactions will be in USDT only. Whenever you need to buy GB Procoin, you can buy it with USDT and even if you want to sell GB Procoin, you will get USDT back in your wallet.

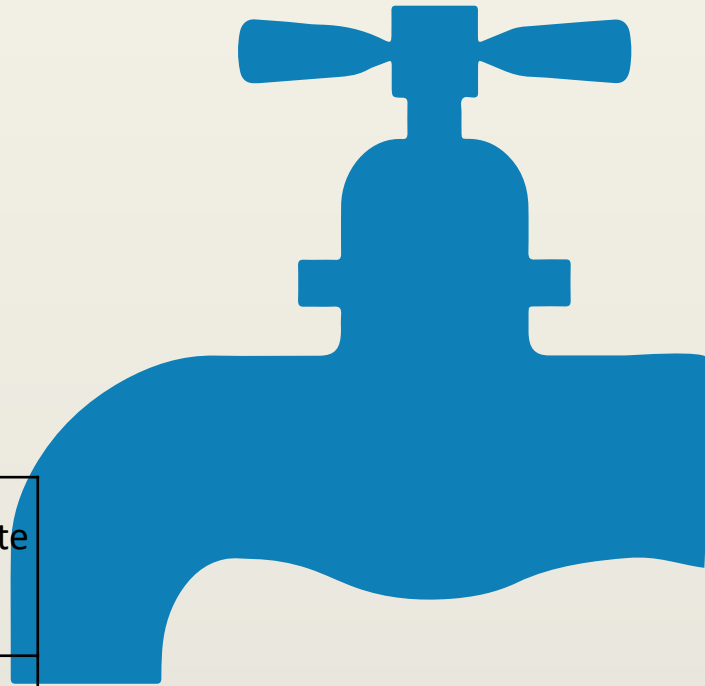

Geldburg procoin is a blockchain-secured membership that grants access to its community, that monetizes community membership. The price of the procoin increases with every sale and purchase with the mathematical logic and system of Geldburg

One of the benefits of the GB Procoin is that your membership in its community becomes a sort of asset. You can resell the procoin more than you paid for it. This makes it feel like an investment instead of just an expense.

Geldberg Procoin is the world's first digital coin that runs on a mathematical algorithm. Because of this, the rate increases when buying the coin, but it increases even more when selling it. The rate of this coin started from .000600, and it will go beyond 1000 USDT in the future because there is no limit to the increase in its rate. The meaning of Procoin is that it will never go below its old rate.
